

Tattletale — OSINT Case Report

REPLAY MODE · 100% SYNTHETIC DATA · NO LIVE SCRAPE

Ana Rivera (@ana_rivera_dev)

Fictional software developer persona used to demonstrate the Tattletale replay pipeline.

Generated: 2026-06-11T06:58:54.962Z

Platforms covered: 4

100% synthetic data. This person does not exist. No real account was scraped.

Intelligence brief

Generated by: extractive · every name and number below is validated against the structured case facts (no hallucinated detail).

Ana Rivera (@ana_rivera_dev) presents 2 distinct identities across 4 platforms (instagram, x, mastodon, facebook). The correlation engine links 3 accounts as one person with high cohesion, and flags 1 same-named account as a likely different individual. Activity totals 14 sampled posts and 16,151 followers, concentrated in the evening (peak around 20:00 UTC). Posts appear in English and Spanish. The mapped network spans 11 contacts, 4 of whom appear on more than one platform. First observed 2021-03-14. Themes: developer, open-source, synthetic-demo.

Per-platform findings

INSTAGRAM · @ana_rivera_dev

Ana Rivera — Building tiny tools. Coffee, Python, and bad puns. she/her.

Followers: 4,821 Following: 612 Posts: 137

URL: https://instagram.com/ana_rivera_dev

- [2024-11-02T19:22:00Z] shipped a CLI that renames 10k files in 200ms. rust go brrr.
- [2024-11-05T20:05:00Z] the compiler caught a bug i would never have. types are just unit tests you don't write.
- [2024-11-08T21:14:00Z] spent the evening squashing a flaky test. it was a missing await. it is always a missing await.
- [2024-11-12T19:48:00Z] ship small, ship often. my CLI got 3 new flags tonight.

X · @ana_rivera_dev

Ana Rivera — dev. i make small things that do one thing well. opinions are load-bearing.

Followers: 9,140 Following: 388 Posts: 2,204

URL: https://x.com/ana_rivera_dev

- [2024-11-05T20:20:00Z] hot take: most retries are just fallbacks wearing a trench coat.
- [2024-11-06T21:47:00Z] spent 3 hours on a bug. it was a missing await. it is always a missing await.
- [2024-11-08T21:30:00Z] rewrote the CLI parser tonight. the compiler did most of the work, honestly.
- [2024-11-13T20:55:00Z] ship small, ship often. that's the whole methodology.

MASTODON · @ana_rivera

Ana Rivera — Federated and proud. Toots about compilers and gardening. she/her.

Followers: 1,320 Following: 540 Posts: 410

- [2024-11-03T20:30:00Z] migrated my blog to a static generator i wrote on a flight. the compiler is my favorite coworker.
- [2024-11-07T21:05:00Z] another evening, another missing await. the CLI works now though.
- [2024-11-11T19:40:00Z] ship small, ship often. pushed a tiny tool that does exactly one thing.

FACEBOOK · @ana.rivera.cocina

Ana Rivera — Cocinera casera. Recetas, familia y los asados del domingo. Madrid.

Followers: 870 Following: 430 Posts: 95

URL: <https://facebook.com/ana.rivera.cocina>

- [2024-11-02T11:40:00Z] Hoy preparé una tortilla de patatas para toda la familia. Receta de mi abuela.
- [2024-11-06T12:15:00Z] El secreto de un buen sofrito es la paciencia. Fuego lento siempre.
- [2024-11-10T13:05:00Z] Domingo de asado con los primos. Nada como cocinar para la gente que quieres.

Cross-identity correlation

Heuristic link score (NOT a calibrated probability): pairwise handle & display-name Jaro-Winkler, bio Jaccard, bounded stylometric agreement, hour-of-day cosine, and shared low-frequency vocabulary — each behavioural signal coverage-gated by post count. A seventh signal, temporal-geospatial co-presence, is an applicability-gated overlay (weight 0.1): when both accounts carry geo+time metadata it rewards distinct posting occasions co-located within 250 m and 30 min and the six behavioural weights renormalize to 0.9; when metadata is absent the signal is inapplicable and the six renormalize to 1.0 (no fabricated value). Accounts agglomerate into identities under a complete-linkage guard.

Identity: Ana Rivera — single account (n/a (single account))

@ana.rivera.cocina (facebook)

Identity: Ana Rivera — 3 accounts (cohesion 0.739)

@ana_rivera_dev (instagram), @ana_rivera (mastodon), @ana_rivera_dev (x)

Strongest links (with evidence):

@ana_rivera_dev (instagram) !" @ana_rivera_dev (x) — score 0.787 [HIGH]

username similarity (ana_rivera_dev !" ana_rivera_dev); writing-style fingerprint (punctuation, casing, function words); shared distinctive terms: "bug", "spent", "always", "tonight"

@ana_rivera_dev (instagram) !" @ana_rivera (mastodon) — score 0.76 [HIGH]

username similarity (ana_rivera_dev !" ana_rivera); writing-style fingerprint (punctuation, casing, function words); posting hour-of-day profile

@ana_rivera (mastodon) !" @ana_rivera_dev (x) — score 0.669 [HIGH]

username similarity (ana_rivera !" ana_rivera_dev); writing-style fingerprint (punctuation, casing, function words); display-name similarity ("Ana Rivera" !" "Ana Rivera")

@ana.rivera.cocina (facebook) !" @ana_rivera (mastodon) — score 0.487 [MEDIUM]

username similarity (ana.rivera.cocina !" ana_rivera); writing-style fingerprint (punctuation, casing, function words); display-name similarity ("Ana Rivera" !" "Ana Rivera")

@ana.rivera.cocina (facebook) !" @ana_rivera_dev (instagram) — score 0.475 [MEDIUM]

username similarity (ana.rivera.cocina !" ana_rivera_dev); writing-style fingerprint (punctuation, casing, function words); display-name similarity ("Ana Rivera" !" "Ana Rivera")

@ana.rivera.cocina (facebook) !" @ana_rivera_dev (x) — score 0.473 [MEDIUM]

username similarity (ana.rivera.cocina !" ana_rivera_dev); writing-style fingerprint (punctuation, casing, function words); display-name similarity ("Ana Rivera" !" "Ana Rivera")

Chain of custody

Append-only SHA-256 hash chain. Each entry binds an artifact's content hash to the previous entry, so any tampering or reordering breaks the root hash below.

#1 normalize — report.json

```

INTERIM ROOT HASH (report + correlation):

7244252db492b247ceda8efb0a182116ca0ac31061dffbc4232519dab924975e

This PDF is hashed AFTER it is rendered, so it cannot contain the final root that covers itself (that would be circular). The hash above seals the report and correlation. The FINAL root hash — covering this PDF too — and its Ed25519 signature live in manifest.json / custody-log.json; verify there with the embedded public key.
